

FACTSHEET

THE MANAGER

Performance Returns

The North MaxQ Macro UCITS Fund (USD Inst. Class) return for the March 2015 period (25th February to 25th March) was **0.41%** bringing the year-to-date return to **0.74%**.

Fund Overview

The North MaxQ Macro UCITS Fund is a global macro fund that seeks to generate absolute positive returns over a market cycle that is uncorrelated to other global macro managers, the broad fund universe and primary interest rate, foreign exchange and equity indices. The investment manager identifies micro-economic and country specific imbalances to develop views and corresponding trading strategies. These strategies provide a diverse source of alpha and are expressed through thematic, relative value and counter-trend exposures. The exposures are constructed to offer the best asymmetric payoff, while minimising expected correlations and providing protection against downside gap-risk. The investment manager prefers to take risk across a number of different strategies. Risk is monitored in real-time at the strategy and portfolio level and individual strategy stop-loss limits are established at the inception of each trade.

Monthly Market Commentary

Markets in March were range bound, with positive data out of the Eurozone somewhat offset by lacklustre US data. Developments in Greece were also in focus as no substantive progress was made in the negotiations between the new government and the European Commission and IMF. This uncertainty will most likely last for a prolonged period. The positive data out of the Eurozone coupled with the enactment of the ECB's QE program helped propel European equity markets to multi-year highs and outperform other developed markets, a trend we anticipate will continue. In the US, FED statements were more dovish than expected and coupled with the weaker than expected economic data has resulted in the markets pushing back the likely date for the first US rate hike from June to September and also projected a much more mild hiking cycle. The Fund's performance in March was overall positive, with the most significant contributors being gains from long positions in Eurozone Equity Indices versus shorts in the US and EM and long USD FX versus a basket of currencies through forwards and options and losses in received CNY rates

Performance Attribution

Returns in March were positive, and mainly driven by the above mentioned positions. Out of a total of 40 strategies that were active during the month of March, 16 had a positive return, 15 had a negative return and 9 were essentially flat. 1 strategy was added and 9 were closed. The figures below show the performance attribution across different regions and by strategy style.

Risk Distribution

As of month end, the North MaxQ Macro UCITS Fund had a Value-at-Risk (“VaR”) exposure of **0.55%** of its net asset value on a 1-day return 95% confidence level. The figures below show the risk distribution across different regions, assets and strategies:

Regions

G3: US, Eurozone, Japan
UK & Swiss: UK, Switzerland
Scandinavia: Norway, Sweden
Non-US Dollar Bloc: Canada, Australia, New Zealand
C. & E. Europe: Czech Republic, Hungary, Poland
EM: Emerging Markets

Asset Classes

Fixed Income: Sovereign bonds, interest rate swap & swaptions, inflation-linked bonds & swaps, futures, options and CDS
Foreign Exchange: FX spot, forwards and options
Equities: Equities, futures and options

Strategy Style

Thematic: Macro views seeking to exploit dislocations between fundamentals and market value
Relative Value: Perceived mis-pricings in two closely correlated assets
Counter Trend: Opportunistic directional exposures due to overextended investor positioning, deteriorating fundamental support and a breakdown in price momentum
