

FACTSHEET

Performance Returns

The North MaxQ Macro UCITS Fund (USD Inst. Class) return for the March 2017 period (22nd February 2017 to 29th March 2017) was **-0.89%** bringing the year-to-date return to **-2.41%**.

Fund Overview

The North MaxQ Macro UCITS Fund is a global macro fund that seeks to generate absolute positive returns over a market cycle that is uncorrelated to other global macro managers, the broad fund universe as well as interest rate, foreign exchange and equity indices. The investment manager identifies micro-economic and country specific imbalances to develop views and corresponding trading strategies. These strategies provide a diverse source of alpha and are expressed through thematic, relative value, counter-trend and quantitative exposures. The exposures are constructed to offer the best asymmetric payoff, while minimising expected correlations and providing protection against downside gap-risk. The investment manager prefers to take risk across a number of different strategies. Risk is monitored in real-time at the strategy and portfolio level and individual strategy stop-loss limits are established at the inception of each trade.

Monthly Market Commentary

March saw US equity markets pause in their remarkable recent advance, as the inability of the Trump administration to repeal Obamacare caused markets to re-evaluate the chances of passing substantial tax and regulatory reforms, undermining one of the pillars to the Trump-growth narrative. We agree with this downgrade and think that further caution is warranted. March economic data out of the US was overall positive albeit bifurcated with positive survey & lackluster hard data. The Fed raised rates by 25bps in March however, the interest rate market is pricing in less than two further hikes, something we feel is too little. In Europe, the Dutch election was a non-event and coupled with better French polls, have led the market to reduce the risk premium implied in French and also Euro assets. Eurozone economic data releases remain positive suggesting continued growth momentum heading into Q2. Finally, the UK formally triggered Article 50. Our expectations are that the difficulties surrounding the negotiations will become evident over the next few months which, when combined with the UK large current account deficit, will result in further GBP weakness. Fund performance in March was lackluster, with no specific strategy having an outsized contribution. Core positions remain short Sterling, paying CZK rates, long volatility and short non-Japan Asian currencies.

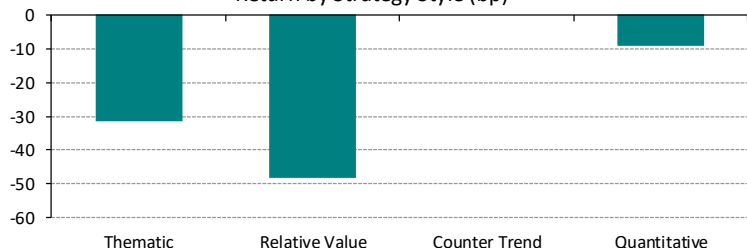

Performance Attribution

Out of a total of 43 strategies that were active during the month of March, 11 had a positive return, 22 had a negative return and 10 were essentially flat. No strategies were added or closed. The figures below show the performance attribution across different regions and by strategy style.
