

FACTSHEET

THE MANAGER

Performance Returns

The Butler Credit Opportunities UCITS Fund was up 0.73% in May (EUR Institutional Class Founder).

Investment Objective & Strategy

Butler Credit Opportunities UCITS is a long/short European Credit fund with a long term target to deliver 8-10% annualized returns while maintaining portfolio volatility below 5% over the credit cycle. The Butler Credit Opportunities UCITS Fund team uses a unique 3 step investment approach placing risk management and preservation of capital at the centre of portfolio management while constantly seeking opportunities to generate superior risk adjusted returns.

- Stage 1:** With their long-standing experience in markets, the team recognizes that the portfolio Beta should always reflect the optimal level of risk in order to preserve capital or generate superior Alpha. BCO's portfolio managers systematically implement a Top-Down approach in order to determine the optimal level of risk for the portfolio.
- Stage 2:** Bottom up focuses on the fundamental analysis of individual securities, assessing key financial parameters for each bond evaluating its potential as a long or short position.
- Stage 3:** Portfolio construction determines the capital allocated to each strategy/position taking into account risk, liquidity, volatility, etc.

Monthly Commentary

May began as expected, with the election of Mr Macron as French President, albeit with a much wider margin than expected over Ms. Le Pen. Inaugurated only one week later, Mr. Macron has been received positively to date and looks likely to win absolute majority in the general election scheduled June 11/18.

From an economic standpoint, recent data has proved slightly disappointing, especially in the US where actual growth/consumption came markedly lower than where ISM surveys and confidence indicators had suggested. However, as the Euro zone and Emerging Markets have retained decent economic momentum, 2017 looks set to be a year of acceleration in global growth.

Adding to this sentiment of a near-ideal economic background, inflation indicators continued to reveal results slightly below expectations, thus leaving the Fed with ample comfort on the timing of further tightening steps (resp. the ECB as to the timing of the QE tapering).

Overall we see no reason to materially alter our constructive positioning on the European HY markets. Despite spreads being at cycle tights, they are still well above 06/07 levels. We will however, closely monitor any material change in political/economic risks.
