

FACTSHEET

Performance Returns

The North MaxQ Macro UCITS Fund (USD Inst. Class) return for the November 2015 period (28th October 2015 to 25th November 2015) was **1.49%** bringing the year-to-date return to **7.52%**.

Fund Overview

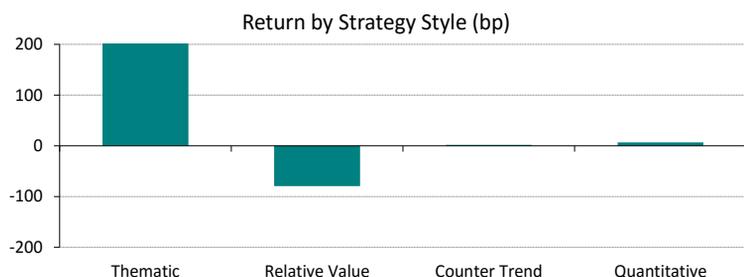

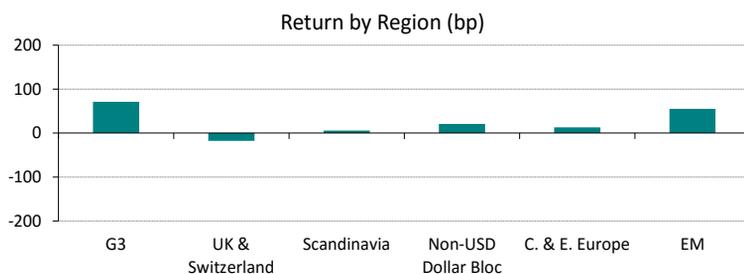

The North MaxQ Macro UCITS Fund is a global macro fund that seeks to generate absolute positive returns over a market cycle that is uncorrelated to other global macro managers, the broad fund universe and primary interest rate, foreign exchange and equity indices. The investment manager identifies micro-economic and country specific imbalances to develop views and corresponding trading strategies. These strategies provide a diverse source of alpha and are expressed through thematic, relative value, counter-trend and quantitative exposures. The exposures are constructed to offer the best asymmetric payoff, while minimising expected correlations and providing protection against downside gap-risk. The investment manager prefers to take risk across a number of different strategies. Risk is monitored in real-time at the strategy and portfolio level and individual strategy stop-loss limits are established at the inception of each trade.

Monthly Market Commentary

Financial market volatility was further subdued during the month of November with everybody's focus on the multiple upcoming monetary policy meetings that will take place during the month of December. On the data front, European economic releases were positive suggesting that the Eurozone is regaining some of its recently lost momentum, inflation however continues to surprise to the downside. The ECB spectacularly under-delivered at its December meeting and as result the Euro had the largest single day move since the financial crisis, while European equity markets and peripheral bonds sold off aggressively. Data out of the US remains lacklustre, but this doesn't seem to be enough to stop the Fed from hiking rates, as most governors, including Chair Yellen, have indicated their desire to start the hiking cycle in December. Finally, geo-political risk as evidenced by the Paris bombings and developments in the Middle East are adding a further degree of downside risk to assets. Our largest risk positions are focused around a divergence of monetary policy between the US and Europe as well as a continued slowdown in China.

Performance Attribution

Returns in November were broad based, both from a strategy and a geographical perspective. Out of a total of 55 strategies that were active during the month of November, 19 had a positive return, 8 had a negative return and 28 were essentially flat. 5 strategies were added and 7 were closed. The figures below show the performance attribution across different regions and by strategy style.

THE MANAGER

Nick D'Onofrio is a Co-Founder, Managing Partner and Chief Executive Officer at North Asset Management. Nick has over 20 years of experience within the industry. Nick is a former Executive

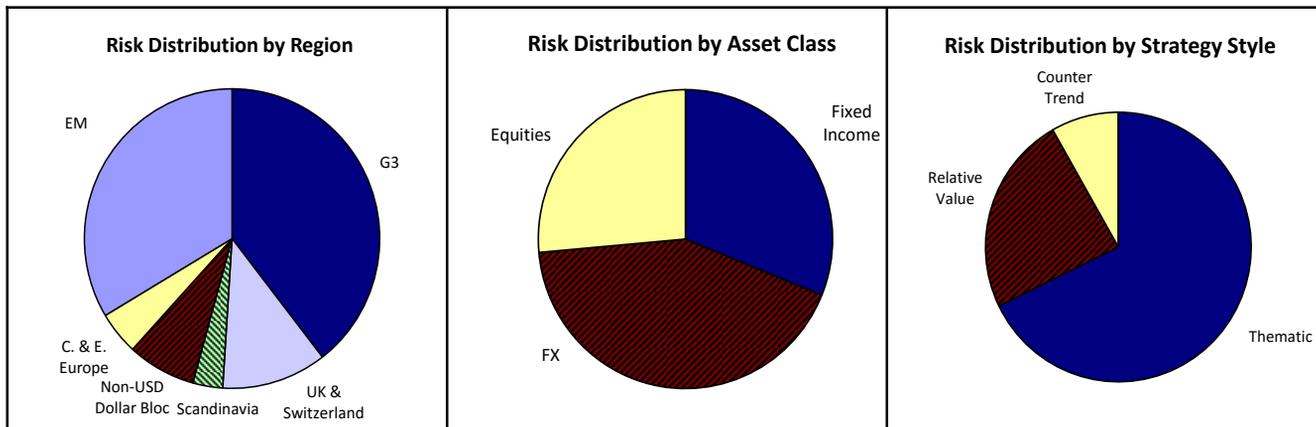

Director at Morgan Stanley within the Finance Department and headed the credit risk team that focused on managing the inherent risk in the broad array of products traded at Morgan Stanley, including fixed income, foreign exchange, equities and commodities. Prior to Morgan Stanley, Nick worked at Swiss Banking Corporation and ABN AMRO. He holds a Bachelor's degree from Harvard University.

Risk Distribution

As of month end, the North MaxQ Macro UCITS Fund had a Value-at-Risk ("VaR") exposure of **0.76%** of its net asset value on a 1-day return 95% confidence level. The figures below show the risk distribution across different regions, assets and strategies:

Regions

G3: US, Eurozone, Japan
UK & Swiss: UK, Switzerland
Scandinavia: Norway, Sweden
Non-US Dollar Bloc: Canada, Australia, New Zealand
C. & E. Europe: Czech Republic, Hungary, Poland
EM: Emerging Markets

Asset Classes

Fixed Income: Sovereign bonds, interest rate swap & swaptions, inflation-linked bonds & swaps, futures, options and CDS
Foreign Exchange: FX spot, forwards and options
Equities: Equities, futures and options

Strategy Style

Thematic: Macro views seeking to exploit dislocations between fundamentals and market value
Relative Value: Perceived mis-pricings in two closely correlated assets
Counter Trend: Opportunistic directional exposures due to overextended investor positioning, deteriorating fundamental support and a breakdown in price momentum
Quantitative: Systematic quantitative strategies using foreign exchange and interest rates in G10 and EM
