

FACTSHEET

THE MANAGER

Performance Returns

The North MaxQ Macro UCITS Fund (USD Inst. Class) return for the December 2014 period (November 26th to December 31st) was **-6.08%** bringing the inception-to-date return to **-2.04%**.

Fund Overview

The North MaxQ Macro UCITS Fund is a global macro fund that seeks to generate absolute positive returns over a market cycle that is uncorrelated to other global macro managers, the broad fund universe and primary interest rate, foreign exchange and equity indices. The investment manager identifies micro-economic and country specific imbalances to develop views and corresponding trading strategies. These strategies provide a diverse source of alpha and are expressed through thematic, relative value and counter-trend exposures. The exposures are constructed to offer the best asymmetric payoff, while minimising expected correlations and providing protection against downside gap-risk. The investment manager prefers to take risk across a number of different strategies. Risk is monitored in real-time at the strategy and portfolio level and individual strategy stop-loss limits are established at the inception of each trade.

Monthly Market Commentary

Markets in December were volatile and dominated by the continuing fall in oil prices. Economic activity data in Europe and Japan again disappointed expectations, while data in the US continued to be positive. The driver of lower oil and whether it is supply or demand driven is an important factor in terms of determining the outlook for 2015 and onwards. Our view is that the drop is predominately supply driven rather than reduced demand. Lower oil prices together with loose global financial market conditions and less restrictive fiscal policy should substantially support global growth and in particular for oil importing countries. During December the Fund suffered from several positions, most notably: an unexpected rate cut in Norway and a weakening of the currency; a significant interest rate rally across developed rate markets with a flattening bias which effected our interest rate positions in the UK, US and New Zealand; and finally some counter trend trades. We are maintaining the majority of these positions and anticipate that markets will reverse some of the year end moves.

Performance Attribution

The return in the month of December was driven by paid positions in rates, particularly in Norway. Out of a total of 33 strategies that were active during the month of December, 13 had a positive return, 19 had a negative return and 1 was essentially flat. 1 strategy was added and 9 were closed. The figures below show the performance attribution across different regions and strategy styles.

Nick D'Onofrio is a Co-Founder, Managing Partner and Chief Executive Officer at North Asset Management. Nick has over 20 years of experience within the industry.

Nick is a former Executive

Director at Morgan Stanley within the Finance Department and headed the credit risk team that focused on managing the inherent risk in the broad array of products traded at Morgan Stanley, including fixed income, foreign exchange, equities and commodities. Prior to Morgan Stanley, Nick worked at Swiss Banking Corporation and ABN AMRO. He holds a Bachelor's degree from Harvard University.
